

ANÁLISIS PRUEBAS DE CARGA

1. SMOKE-TEST.

El test de carga Smoke Test finalizó exitosamente con tiempos de respuesta muy rápidos. Esto significa que el servidor funciona correctamente en situaciones de carga baja y de corta duración.

```

default ✓ [=====] 5 VUs 1m0s
```

2. BREAKPOINT-TEST.

Tras el breakpoint-test hemos conseguido identificar el punto de ruptura de servidor al superar el 1% de peticiones fallidas. Se ha probado el test usando executor 'ramping-arrival-rate' y sin este y en ambos tests se han obtenido resultados muy similares.

- Con executor 'ramping-arrival-test':

```

3. STRESS-TEST.

En el test de carga Stress-test hemos conseguido llegar al 80% del punto de ruptura sin ninguna petición fallida con un tiempo de respuesta bajo. Esto nos quiere decir que el servidor tiene la capacidad suficiente para manejar situaciones en las que el servidor recibe más peticiones de las habituales durante un tiempo moderado.

```

scenarios: (100.00%) 1 scenario, 8000 max VUs, 8m30s max duration (incl. graceful stop):

4. AVERAGE-LOAD-TEST.

En la prueba de Average Load Test hemos evaluado el rendimiento del servidor bajo condiciones de carga moderada. El sistema manejó una carga del 50% del punto de ruptura sin problemas, por lo que podemos afirmar que el sistema es estable cuando es sometido a demandas moderadas.

```

```

5. SPIKE-TEST.

Los resultados del Spike Test nos dicen que el sistema que hemos probado es 'robusto' frente aumentos repentinos de peticiones, manteniendo además un buen tiempo de respuesta.
